Zona Industriale Valle Cupa - 64010 COLONNELLA (TE)

INDUSTRIA PRODUZIONE AMMENDANTE COMPOSTATO

MONITORAGGIO OLFATTOMETRICO ESEGUITO
NEI MESI DI OTTOBRE – NOVEMBRE 2016 PRESSO:

A) SITO AZIENDALE DAL 01/10/2016 AL 04/10/2016;

B) PRESSO FAMIGLIA GIROLAMI R., C.DA VALLE CUPA DI
COLONNELLA (TE) DAL 05/10/2016 AL 15/11/2016;

C) SITO AZIENDALE DAL 16/11/2016 AL 30/11/2016.

Il direttore tecnico
Ing. Mauro Scacchia

Il sito industriale della STAM Srl è dotato di un sistema olfattivo per uso esterno EOS Ambiente 507F di SACMI, dove EOS è l'acronimo di Electronic Olfactory System, vale a dire un apparato elettronico composto da n. 6 sensori MOS (Metal Oxide Semiconductors), che si basa sulla variazione di conducibilità dell'ossido in funzione delle diverse sostanze odorigene; esso costituisce un sistema idoneo alla misura delle emissioni olfattive in campo aperto, che consente di effettuare in continuo ed in automatico il riconoscimento qualitativo delle sorgenti odorigene, nonché di determinare in termini quantitativi la concentrazione di odore dell'aria analizzata, simulando il processo mentale di memorizzazione e riconoscimento proprio del sistema olfattivo umano: così come i ricettori umani inviano segnali al cervello, i sensori dello strumento, stimolati dalla diffusione delle sostanze volatili, inviano un segnale elettrico all'elaboratore elettronico; tali sensori non sono selettivi verso uno specifico analita, bensì verso diverse "classi" di analiti, per cui a ciascuna classe di odori viene poi assegnato un nome, che serve a distinguere le varie emissioni registrate. Lo strumento quindi non identifica la composizione chimica del composto, ma ne associa la somiglianza a composti già analizzati, creando una sorta di "impronta olfattiva" della miscela, da confrontare con una libreria di odori precedentemente costruita durante la fase di "addestramento", nella quale un software dedicato ha il compito di memorizzare l'impronta olfattiva di un campione, formato a sua volta da una miscela di composti, che spesso sono presenti a concentrazioni inferiori al limite di rilevabilità analitica, ma che avendo un'alta soglia di percezione riescono a stimolare i sensori del naso. Il monitoraggio in continuo degli odori viene condotto secondo le "Linee guida per il monitoraggio delle emissioni gassose provenienti dagli impianti di compostaggio e bioessiccazione" elaborate dall'ARTA Abruzzo, nonché del Manuale APAT "Metodi di misura delle emissioni olfattive" n.19/2003 che approfondisce le tecniche di determinazione per la rilevazione dei composti odorigeni e i modelli matematici di ricaduta al suolo.

SENSORE OLFATTOMETRICO SACMI EOS 507F

La planimetria dello stabilimento indica la posizione normalmente occupata dal naso elettronico (cerchio rosso in alto a sinistra), nonché delle varie sorgenti odorigene campionate. I punti di campionamento sono stati stabiliti in modo tale da essere rappresentativi di tutte le emissioni odorigene di cui si intende rilevare la presenza nell'ambiente circostante al sistema di misura.

Per quanto riguarda l'addestramento del sensore olfattometrico elettronico, le varie sorgenti odorigene campionate sono state individuate sulla base dei seguenti quattro odori presenti all'interno del sito industriale:

- Zona Ricezione materiali in lavorazione;
- Zona Ossidazione;
- Zona Maturazione;
- Biofiltri (Zona maturazione e Zona ossidazione).

I primi tre odori sono stati campionati in locali chiusi mediante raccolta di aria ambiente, mentre per i biofiltri, che costituiscono flussi di aeriformi da sorgente estesa, gli odori vengono campionati mediante l'uso di una cappa a base quadrata, secondo quanto previsto dalla norma UNI EN 13725:2004.

I campioni aeriformi odorigeni sono sottoposti a prova mediante olfattometria dinamica presso un laboratorio dotato di Camera Olfattometrica, cioè un ambiente che risponde ai requisiti fissati dalla norma UNI EN 13725:2004. L'addestramento dello strumento rappresenta la prima fase fondamentale del monitoraggio, dato che il naso elettronico non riconosce i singoli composti chimici che costituiscono l'odore, ma restituisce l'impronta olfattiva dell'aria che analizza, per cui, per un corretto funzionamento è necessario creare un database delle impronte olfattive che l'aria potrebbe assumere per effetto delle emissioni di odore circostanti.

A tal fine, sono stati sottoposti al naso elettronico una serie di campioni di qualità olfattiva nota (stabilita in fase di analisi di laboratorio), il quale li aspira e li diluisce automaticamente, in modo da creare delle rette di calibrazione a diversi valori noti di concentrazione di odore. Successivamente vengono attribuite delle etichette di riconoscimento, e inserite le relative concentrazioni note, al fine di stabilire le classi olfattive, che nel caso in esame sono quelle di cui ai dati di output.

Di seguito vengono riportati i certificati rilasciati dal laboratorio LOD di Udine, regolarmente abilitato all'effettuazioni di analisi olfattometriche secondo la norma UNI EN 13725:2004, sui prelievi di campioni gassosi prelevati in data 5 Dicembre 2013, 11 Marzo 2014, e 14 Luglio 2016

7

Nel mese di Settembre 2016 la Sig.ra Girolami Rossella, residente in Contrada Valle Cupa di Colonnella, la cui abitazione è evidenziata dal cerchio rosso in basso a destra nella seguente foto aerea, la quale dista circa 420 metri dallo stabilimento della scrivente, segnalava direttamente alla STAM Srl la percezione di emissioni maleodoranti di provenienza non accertata.

La scrivente, presa conoscenza di tale problematica, si è prontamente attivata per individuare tutte le possibili fonti di emissioni diffuse nell'ambiente circostante, eseguendo i seguenti lavori di verifica e manutenzione:

- A) ricontrollo dello stato di integrità di tutte le tubazioni di estrazione delle arie esauste e di immissione al trattamento di biofiltrazione;
- B) ricontrollo delle chiusure di tutti i possibili punti di perdita sulla copertura superiore del capannone, in particolare sulle guarnizioni dei lucernari e delle onduline, nonché sulle tubazioni della preesistente industria tessile, attualmente inutilizzate (prese d'aria, scarichi vari, camini della centrale termica smantellata);
- C) applicazione presso le n. 2 porte delle zone maturazione di diffusori di acqua nebulizzata addizionata di miscele enzimatico-batteriche additivate con soluzioni deodoranti.

Nel contempo, in data 05/10/2016, previa comunicazione al Settore Ambiente della Provincia di Teramo, all'ARTA Dipartimento di Teramo, e al Sindaco del Comune di Colonnella, si provvedeva ad effettuare un periodo di monitoraggio in continuo direttamente presso il sito della famiglia stessa, mediante l'installazione del sensore olfattometrico elettronico in dotazione alla scrivente descritto in premessa, fino alla data del 14/11/2016, i cui dati di output risultanti sono oggetto del presente rapporto di prova.

Monitoraggio olfattometrico
1 OTTOBRE –
30 NOVEMBRE 2016

Durante la fase di monitoraggio mediante l'utilizzo del sensore olfattometrico in continuo presso il domicilio della Famiglia Girolami, alla stessa veniva richiesta la compilazione di un questionario per il rilevamento degli orari e dell'intensità delle percezioni odorigene, secondo la seguente scala di odori:

Valore 1 **percezione odore debole**
Valore 2 **percezione odore media**
Valore 3 **percezione odore forte**
Valore 4 **percezione odore fortissima**

con richiesta di riferire anche il tempo di percezione del singolo evento, con l'accordo di avvertire tempestivamente il personale della STAM Srl per la constatazione dell'effettiva presenza di cattivo odore in concomitanza dell'evento segnalato.

Relativamente al periodo di monitoraggio effettuato, la Famiglia Girolami ha rilevato ed attestato le seguenti percezioni odorigene:

Girolami

Le percezioni olfattive rilevate ed attestate dalla Famiglia Girolami nel periodo di monitoraggio (5 Ottobre/15 Novembre 2016) sono state le seguenti:

DATA	ORA	DURATA	INTENSITA'	PERCEZIONE
09/10/2016	10	Non continuativa	2	Media
12/10/2016	9	Non continuativa	3	Forte
13/10/2016	10	Non continuativa	2	Media
14/10/2016	12	Non continuativa	3	Forte
12/11/2016	8	Non continuativa	2	Media

Tali rilevazioni di percezione di odore corrispondono a una percentuale inferiore al 1,3% del tempo totale di rilevamento nella fase di monitoraggio, ma per una corretta procedura di validazione degli eventi è necessario sottolineare che gli stessi non sono mai stati direttamente riscontrati dal personale preposto dalla STAM Srl, in quanto la Famiglia Girolami, contrariamente agli accordi intercorsi, non ha mai provveduto ad inoltrare chiamate telefoniche per le necessarie constatazioni in contraddittorio dell'effettiva presenza di odori molesti imputabili all'attività lavorativa della STAM Srl.

I dati di output registrati dal naso elettronico EOS 507F di SACMI vengono riportati nelle tabelle di cui alle pagine successive, nelle quali si evidenziano i gradi di percezione di ogni classe olfattiva espressi in concentrazione di Unità Odorimetriche, unitamente alla Temperatura e all'Umidità dell'aria, alla Direzione e Velocità del vento, nell'arco temporale giornaliero con scansione di rilevamento di 10 minuti.

Nel caso in esame sono state stabilite le seguenti classi olfattive:

- Ricezione (riferito alle emissioni dei biofiltri della zona Ricezione);
- Ossidazione (riferito alle emissioni dei biofiltri della zona Ossidazione);
- Maturazione (cioè le emissioni dei biofiltri della zona Maturazione 1 e 2);
- UN (non definito), in caso di sostanza sconosciuta al naso;
- AIR (aria pulita, cioè assenza di odori, o di odori al disotto della soglia di rilevabilità).

DETERMINAZIONE DELL'IMPATTO OLFATTIVO

Il monitoraggio effettuato mediante l'utilizzo del sensore olfattometrico elettronico SACMI EOS 507F presso l'abitazione della Famiglia Girolami consta di 4.337 misurazioni, le quali hanno evidenziato quanto segue:

- A) La percentuale di misure in cui il naso elettronico ha attribuito l'aria analizzata alle classi olfattive riconducibili all'attività produttiva della STAM Srl sono le seguenti
- | | | |
|------------------|-------|-----------------|
| a. "ricezione" | n. 27 | pari allo 0,62% |
| b. "ossidazione" | n. 22 | pari allo 0,51% |
| c. "maturazione" | n. 46 | pari allo 1,06% |

Tali percentuali, anche sommate tra esse (2,19%), risultano essere di gran lunga inferiori al limite del 15% sulle immissioni di odore per le zone industriali o agricole, fissato dalle Linee Guida tedesche del 13 Maggio 1998 "GIRL (Geruch Immission Richt Linie)", che in assenza di normativa specifica italiana può essere assunta come riferimento di valore internazionale; la percentuale di misure in cui il naso elettronico ha attribuito all'aria analizzata la classe olfattiva "UN", cioè sconosciuta rispetto alle impronte olfattive riconoscibili dal sistema, si attesta in un valore di poco inferiore all'8%, per un totale di odori percepiti, riconosciuti e non, di poco superiore al 10% del totale del tempo di rilevamento;

Tali percentuali appaiono del tutto compatibili con le percezioni olfattive rilevate dalla Famiglia Girolami nel questionario tabellare consegnato dalla STAM Srl, le quali nel periodo

di monitoraggio (05 Ottobre/14 Novembre 2016) corrispondono a una percentuale inferiore al 1,3% del tempo totale di rilevamento nella fase di monitoraggio.

Si tiene a precisare che gli eventi di percezione di odore registrati da parte della Famiglia Girolami non sono mai stati direttamente riscontrati dal personale preposto dalla STAM Srl, in quanto la Famiglia, contrariamente agli accordi intercorsi, non ha mai provveduto ad inoltrare chiamate telefoniche per le necessarie constatazioni in contraddittorio dell'effettiva presenza di odori molesti.

- B) I venti dominanti rilevati presso il sito monitorato sono indubbiamente quelli provenienti dai quadranti SUD – SUD EST, corrispondenti all'opposto della posizione del sito industriale STAM Srl rispetto al punto di misurazione, per cui gli odori percepiti dalla strumentazione ma non riconosciuti tra quelli oggetto di addestramento mediante olfattometria dinamica, contraddistinti con l'etichetta "UN", provengono da tali zone, in cui risultano essere effettivamente presenti allevamenti intensivi avicoli di rilevante entità, che producendo rifiuti di natura organica, possono potenzialmente emettere odori molesti nell'ambiente circostante, i quali possono essere facilmente confusi dalla popolazione con quelli caratteristici dell'attività di compostaggio svolta dalla STAM Srl.

CONCLUSIONI DELL'ATTIVITA' DI MONITORAGGIO

Dall'analisi dei dati registrati dal sistema SACMI EOS 507F durante il periodo di monitoraggio, e dai riscontri registrati direttamente dalla Famiglia Girolami, si può osservare che l'attività produttiva della STAM Srl genera presso il sito monitorato una situazione di impatto olfattivo irrisorio.

Sulla base delle rilevazioni effettuate durante il periodo di monitoraggio, è possibile affermare che allo stato attuale:

- l'odore attribuibile all'impianto è in generale valutato come debole;
- esso viene percepito sporadicamente nelle ore mattutine, in concomitanza dell'inversione delle brezze di mare e di terra lungo l'asse della vallata del Tronto;
- la presenza di odori sconosciuti (UN) per una percentuale del 8% rileva l'esistenza altre fonti odorigene nelle zone circostanti, potenzialmente attribuibili alle motivazione esposte nella pagina precedente.

E' da considerare infine che il coinvolgimento nelle attività di monitoraggio del personale dell'impianto e della popolazione residente ha permesso sia una migliore conoscenza da parte di quest'ultima delle attività svolte presso l'impianto produttivo, ad impatto tossicologico nullo sulla salute umana, nonché la partecipazione attiva al processo di miglioramento degli standard qualitativi delle emissioni odorigene in uscita dall'impianto.
